

ETS 4.9.0 Release Notes

FDIC Users: For the latest ETS News and Information, please see the [ETS RMS Website](#)

Release Type

☐ Major ☒ Minor ☒ Bug fixes

What's New (release 4.9.0)

This release includes minor enhancements and bug fixes, including, but not limited to:

Enhancements:

1. Finalized development for the 2 remaining Loan Portfolio Audit Tool (LPAT) queries, which require additional input from users to create the child LPAT playlist during import of bank loan files. The queries included are:
 - (a) Approaching Loan Officer Limits
 - (b) Lengthy or Negative Amortizations

Bug Fixes:

1. Fixed an Object Reference Error when opening Directors, Trustees and Officers (DTO) Page on certain banks when Shareholder & Holding Company Biographies were blank.
2. Fixed a known issue where ETS backups created before ETS v4.8 would not load into v4.8.
3. Fixed a known issue with exporting assets to Excel which would result in an .xls file that did not open in Excel like it did for FDIC employees on Windows 10. New file format is .xlsx.
4. Addressed a display issue where the File > Print feature within ETS was not producing a clear image. Increased DPI of image and set default zoom to page view instead of to fit the page.
5. Addressed an issue with FDIC Windows 11 laptops where the ETS icon was not getting copied to the desktop when OneDrive backup was enabled. ETS v4.9 icon should appear in Start Menu and Desktop after installing from Company Portal, regardless of OneDrive settings.
6. Fixed a known issue where opening a linesheet then switching back to the loan scoping grid would result in resetting the previous scroll position back to the top of data grid.
